

Exercise

filter with %in%

We can also use the `%in%` to filter with `dplyr`. For example you can see the data from New York and Texas like this:

```
filter(murders, state %in% c("New York", "Texas"))
```

Instructions

100 XP

- Create a new data frame called `murders_nw` with only the states from the Northeast and the West.
- How many states are in this category?

Take Hint (-30 XP)

script.R

Dark Mode

```
1 # Create a new data frame called murders_nw with only the states from the
  northeast and the west
2 murders_nw<-filter(murders,region %in% c("Northeast","West"))
3 # Number of states (rows) in this category
4 nrow(murders_nw)
```
